EXPERIENCE:

Product Management Intern: Hitachi Data Systems, Santa Clara CA October 2014 – Present

My role is to develop solutions to internal problems and working with different teams and individuals across the world. At Hitachi we develop information storage and virtualization solutions to manage and protect client data.

Founder: Coldbrew Creative LLC, San Jose CA Founded August 2012 – Present.

I currently own and maintain Silicon Valley Creative Agency, Coldbrew Creative. We assist clients in creative marketing strategies and develop solutions that creatively increase revenue.

Co-Founder: Metafora LLC, San Jose CA Founded September 2013 – Present.

Metafora LLC provides mobile, web, and application solutions for transit and transportation companies in the San Francisco Bay Area, currently working with software provided by Valley Transportation Authority (VTA).

PROJECTS/COURSES

Satellite Tracking Station: Valley Christian High-School San Jose CA, April 2011– Aug 2012.

Earned my Technician Class radio license and built antennas that are currently on the roof of our school. Students use there to communicate with other HAM radio users around the world.

ISS: International Space Station Project, Valley Christian High-School San Jose CA, June 2010–Aug 2012.

We were the first high-school in the world to put a fully automated experiment on the International Space Station. The first year I was a Mechanical Engineer, my job involved testing, designing, and fabricating the payload. For the 2012 Project I was the Deputy Leader of Systems Integration. My job was to consult with other groups and make sure that their projects work and fit the set criteria.

Leadership: Valley Christian High-School San Jose CA, August 2010 – July 2013.

In this course we mentor high school freshmen and give them advice on different subjects. We also help setup and plan different events that happen at our school.

Lunar Dream: Valley Christian High-School San Jose CA, September 2011–March 2012.

Project that is closely watched by NASA, we worked with them to track different disturbances or discoveries in our universe. It is mainly focused on studies that deal with the moon.
